ABSTRACT:

Iceland has some of the world's leading manufacturers of dedicated electronic hardware and software for fishing and seafood companies. Some of these manufacturers are MTS Software, Marel, Pols of Isafjordur and BR Solutions. Latest offerings from these firms include MTS Software's **WiseFish**, which is available in separate modules, and Marel's MPS system, a user-friendly Windows interface for personal computers. Other new products for the fishing and fisheries industries are Pols' Flow Portioner and BR's Operation Opt.

Enterprising Scotland Ark teams up with TM Software
SCOTSMAN, p4
November 28, 2000
JOURNAL CODE: FSCT LANGUAGE: English RECORD TYPE: FULLTEXT
WORD COUNT: 1046

PERTH-based Ark Computing Solutions has tied up a major deal with Icelandic software group, TM Software.

Ark, Scotland's leading supplier of Navision software, says the link with bring about further growth for the firm and will create 10 new jobs over the coming months. Ark's managing director, Jonathan Revell, says the partnership will not only bring in substantial financial investment, but will "create the ideal solutions provider, a company that is local and customer-orientated yet has the resources and depth of experience of a multi-national organisation."

TM Software employs 250 and has offices in Iceland, Canada, Norway and the United States. The deal will also bring in the marketing of **Wisefish**, a software package specially designed for the European fishing industry for which TM Software also supplies financial packages. Ark supplies Navision software packages to clients such as Celtic Football

Club, the Edinburgh International Festival and Stolt Sea Farm.

Sainsbury's using more food SMEs

TEN small entrepreneurial food companies, who supply Sainsbury's were celebrating the success of the supermarket group's supplier development programme.

The 10 companies on the supplier programme increased their business with Sainsbury's by Pounds 7.8 million worth of business as a direct result of the project, and are projecting Pounds 20 million worth of business by November 2001.

Stuart Mitchell, Sainsbury's trading director said: "At the start of the programme in June, we sourced Pounds 200 million per annum of products from 90 Scottish suppliers - some products specifically sourced for sale in Scotland, others to be sold throughout the United Kingdom. We now source over 20 per cent more products from Scotland, we have 100 suppliers and most products are sold throughout the whole of the UK."

Sainsbury's currently sources more than Pounds 125 million from Scottish food companies and is looking to increase this by 10 per cent within two years.

MacLelland's of Glasgow, the largest firm involved in the programme, increased business with Sainsbury's from Pounds 7 million to Pounds 8.5 million.

Others involved in the programme were Simon Howie Butchers from Motherwell, Koepon Dairies, Rannoch Smokery, Macrea, Bell Bakers, Castle MacLelland, Simply Organic, Aulds Food, and Well Pickled.

IBS raises Pounds 1 million for expansion

EDINBURGH based Internet Billing Solutions (IBS), which provides pay-to-view internet content to websites, is raising Pounds 1 million for expansion.

Established 11 months ago, IBS offers clients a business suite of micro-payment solutions, enabling them to generate revenues from a pay-to-view model.

The firm supplies websites with content such as horoscopes, games and share tracking applications, which are billed to users' telephone bills using a system called ChargitDial. It has also launched the first online dating model incorporating videoconferencing and chat that allows users to purchase membership either through their credit cards or their phone bills.

IBS currently has a partnership with astrologer Russell Grant to build and syndicate his content to major European and US lifestyle sites.

In addition, the company has contracts with Lycos, Emap Digital, World Online, MSN and News International.

IBS said it has already reached the breakeven point, and expects to have Pounds 1 million in sales next year. According to the company, the potential market for premium content is estimated to be worth Pounds 1 billion in the UK alone.

Andrew Montague, commercial director at IBS, said: "The key objective of successful portals and lifestyle sites is to populate their pages with high quality content.

"However, relying solely on advertising revenues to support the cost of obtaining this content can restrict the quality and interest a site has."

The second round of funding will finance the growth of the company. IBS has offices in Edinburgh, London and Rotterdam and plans to open an office in the US in May.

Global Internet Billing (GIB), a US-based company with \$70 million in annual turnover, own 35 per cent of IBS. GIB supplies IBS with their online billing platform and gives the company direct access to all its new products and support from its technical team.

Technology gap widens

AN increasing number of Scottish SMEs are embracing e-commerce, but the gap is widening between technology haves and have-nots.

These are the conclusions of a study of 1,000 companies with fewer

than 250 employees commissioned by BT Scotland. The businesses surveyed were questioned on their attitudes to communications, e-commerce and the internet.

Researchers found that while 28 per cent of SMEs have a website, a quarter have no PC and nearly half have no internet access. One in three of the companies questioned makes purchases online, but only five per cent sell over the web.

Commenting on the barriers to uptake of e-commerce among some businesses, Mike Langston, managing director of BT Small & Medium Enterprises, said: "Chief among them are time famine and skills shortages. Small businesses are very busy places and the time of the owner-manager is very much in demand. They often, understandably, do not have the time to stop, let alone the time to stop and write an e-business strategy."

The survey also found that businesses in certain sectors are more likely to have PCs than others. Some 96 per cent of manufacturing and 90 per cent of financial services companies said they use computers, compared with 65 per cent of retail businesses and 50 per cent of hotels and restaurants.

In addition, the study identified regional variations in computer penetration, with 78 per cent of SMEs in West Central and Kilmarnock using PCs versus 63 per cent in Tayside.

Amongst those businesses not using computers, 37 percent cited cost as a deterrent, and 35 per cent said they were concerned about a lack of knowledge and computer literacy.

And while 89 per cent of financial services SMEs have access to the internet, only 67 per cent of retail and 55 per cent of construction companies said they use the web.

Bob Downes, director of e-business development for BT Scotland, said the report will enable BT "to ensure our provision of services in the SME market is tailored to meet the specific needs outlined in the study.

"We are looking very closely at how we can best address these needs and enhance our existing portfolio of voice and data solutions, for instance through the creation of small business portals."

TEXT:

HALIFAX, Oct. 4 /CNW/ - TM Software Inc., developer of the world leading fisheries management software **WiseFish**, and a pioneer in adapting technology to seafood processing facilities in Europe and North America, today announced that it plans to host an open house and Canadian operations launch on October 29, 1999. Company representatives, the business community, and government officials from Iceland, the United States and Canada will gather to celebrate the opening ceremony scheduled to commence at 16h00.

"Halifax was selected for its inherent knowledge-base, cosmopolitan business atmosphere and proximity to our markets," said Fridrik Sigurdsson, Chief Executive Officer of TM Software (TolvuMyndir hf.), "We have strong ties with Canadians, especially through our common tradition of fisheries."

The Icelandic fishery has been a global pacesetter in accepting technology as its primary method for quality control and process automation. The industry is seen as a leader in production efficiency by using equipment and software designed to assist in overall plant optimization.

TM Software recently completed Canadian **WiseFish** installations in St. Anthony, Newfoundland and Vancouver, British Columbia. With over thirty-five installations in Iceland, **WiseFish** has been in the forefront of development by adapting to needs of various geographic markets.

WiseFish was developed using the same C/SIDE language, as Navision software base products and add-ons. TM Software Canada is a value-added reseller of Navision software products in the Atlantic Canada region with the number of employees expected to grow to near twenty within the next twelve months.

"We are very excited about having Canadian fish processing plants utilize our technology," said Jason King, managing director of North America operations.

"Having **WiseFish** interface with Navision allows us to offer a very solid and complete enterprise solution to our clients throughout North America."

TolvuMyndir hf. (TM Software Iceland)

Founded in 1986, TM Software is considered a leader in client/server application development in Iceland within the fisheries, banking and consulting fields. For more information contact: Mr. Kari Gudjonsson, Marketing Director

WORD COUNT: 173

An innovative catch information system on fishing vessels will enable fish products to be traced back to source.

Retailers, branded product suppliers and large catering chains are all increasingly demanding full traceability in the fish supply chain.

The new system developed by the Sea Fish Industry Authority will help satisfy that requirement, with the added bonus of improving fish quality.

Working in tandem with two commercial partners, Upstream Marine Systems and Nesco, Seafish has developed a software system that transmits catch information from the fishing vessel to shore buyers, including the size and grade of the fish caught and the time of stowage.

This information is also provided in a barcode format attached to the side of each box of fish landed.

During sea trials, Seafish researchers also found that the system encourages fishermen to adopt good fish handling practices, resulting in the landing of fresher fish.

Mark Boulter, Seafish senior fish technologist, said: "This forward information system provides complete traceability of the catch and improves the quality of fish landed for sale."

Journal Subject Category: FOOD SCIENCE & TECHNOLOGY

Abstract: Increasing globalization of our food supply combined with recent outbreaks of foodborne disease has heightened concerns over food safety issues around the globe. In response to these growing concerns, both by

government and consumers, many nations are looking at food traceability as a means to restore confidence in the food supply and limit damages incurred by the sale and distribution of unsafe products. Traceability, which allows for the tracking of food products through all steps of production, distribution, and sales, can provide information on the nature, origin, and quality of a product; allowing consumers to make more informed purchasing decisions while providing the proved vertical integration between entities and the development of standards for the collection and dissemination of traceability data. Fortunately, rapid advances in information technology have made it possible to implement traceability systems within the food industry. This review will explore the current trends toward traceability in the U.S. seafood industry. Current legislation, both here and abroad, and its effects on the seafood industry will be explored, and the design of a traceability system will be discussed.

ABSTRACT: A system developed by Nesco Weighing that meets EU standards for full **seafood traceability** is described in this article. The Traceway is an integrated system that can trace the progress of fish in processing plants and other applications. The benefits and features that the system offers processors are discussed, including reduced product recall, connection to any size weigh platform, links using mobile telephones, hard wire, modem or radio to back office systems, and production of data as a bar code that can be added in a number of ways. Ports adopting this system are examined.
